DETAILED ACTION

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-16 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-16 of prior U.S. Patent No. 6,328,119. This is a double patenting rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 17 is rejected under 35 U.S.C. 102(b) as being anticipated by Prewo (4,260,441).

Prewo teaches a method for connecting a first object to a second object along a common contact surface, wherein the first object comprises at the location of the contact surface a portion for connecting means to be applied, which portion is accessible along at least one edge zone of the second object (Column 1, lines 8-27), which method comprises providing a first and second

object ; holding the first object against the second object along a common surface (Column 1, Lines 8-27); melting and atomizing particles of a material suitable as a connecting means and (Column 1, Lines 8-27); and depositing along the at least one edge the material particles in molten state on the first object and on the edge zone restively the edges of said opening in a quantity such that in solidified state the deposited material parties form a connection between the first and second object (column 1, Lines 8-27).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
